### Your Stroke Index Calculation Explained

The index calculation provided by this report is based on guidance contained in the GA document: *COURSE MANAGEMENT, MARKING THE COURSE, & COURSE SET-UP PROCEDURES - Golf Australia Recommendations (Version - 28 March 2014)*.

The calculation is performed as follows...

- The hole by hole results for the selected course with ...
  - a Normal score status,
  - that are not Wipe holes and,
  - are less than or equal to Par + 2

are included in the analysis.
- The results are divided into 6 Handicap Groups based on Daily Handicap. Index 1 is calculated on the results of the 1<sup>st</sup> three groups and Index 2 is calculated on the 2<sup>nd</sup> three groups.
- A measure of difficulty is calculated as the Number of Strokes minus Par. The results are summed for each hole in each group and a mean (average) calculated.
- The averages are then ranked in descending order. This becomes the measure of difficulty for each hole relative to all other holes.
- The six most difficult holes are then selected for each handicap group. Thus group 1 will be used to calculate indexes 1 - 6, group 2 indexes 7 - 12 etc etc.

The statistical analysis provided relies on a good sample size to be reliable. In addition results throughout the seasons should be considered should seasonal variation be a factor at your club.
